# *PROJECT DOCUMENTATION*

***Title Page**:* Global Fuel Prices and Taxation Trends: A Comprehensive Global Performance Intelligence Report

**Student Name: Urvashi Choudhary**

**Supporting files:** Github Repository

***PROBLEM STATEMENT:***

This project aims to analyze the impact of government taxation on final fuel prices and create a performance intelligence report.

**Business Questions:**

- Which countries have highest/lowest petrol & diesel prices?
- What is role of Tax % in final price?
- What is Petrol-Diesel Price Gap?
- How to visualize for decision making?

*2.* **DATA COLLECTION**

- Dataset: global_fuel_prices_Dataset.csv (150+ Countries)
- Columns: Country, Petrol USD/L, Diesel USD/L, Tax Percentage, GDP
- Source: MySkillWallet / Global Fuel Prices Open Dataset
- Why this data? Directly connects Market Price + Tax for correlation analysis.

*3.* ***DATA CLEANING & PREPARATION***

1. Imported CSV into Tableau - checked 150+ rows
2. Checked nulls - 2 missing Diesel values replaced with avg
3. Changed Data Types - Country=Geographic, Prices=Measures
4. Created Calculated Field: Price Gap = -
5. Created Groups: High Tax (>50%), Medium (20-50%), Low (<20%)
6. Verified country names with Tableau maps
7. *Amount of Data Rendered: 100% - COMPLETED*[Petrol][Diesel]

*4.* ***DATA ANALYSIS & VISUALIZATION PROCESS***

- *Sheet 1 - Petrol Prices:* Horizontal Bar Chart, Blue Gradient, Top = Hong Kong ($2.90)
- *Sheet 2 - Diesel Prices:* Bar Chart, ~5.0 USD/L Hong Kong highest
- *Sheet 3 - Map:* Choropleth World Map, Color=Petrol Price, Tooltip=All prices + Tax
- *Sheet 4 - Tax Impact Map (Main):* Correlation 0.85 - Tax increase = Price increase
- *Sheet 5 - Price Gap:* Positive Gap=Petrol costly (India/USA - diesel subsidized), Negative Gap=Diesel costly (Europe)

*5.* ***DASHBOARD & STORY (WEB INTEGRATION****)*

- *Dashboard Name:* Global Fuel Prices & Taxation
- Layout: Map (Top) + Petrol Chart (Bottom Left) + Diesel Chart (Bottom Right) + Tax Legend + Country Filter
- Interactivity: Click on map highlights country in charts
- *Story Name: Global Fuel prices - Tax Impact Story*
    - Point 1: Worldwide Petrol Prices
    - Point 2: Worldwide Diesel Prices
    - Point 3: How Tax Percentage Affects Price
    - Point 4: Final Summary Dashboard
- *Web Integration Steps:*
    - Saved http://as.twbx
    - Uploaded to GitHub: urvashii-23/fuel-prices-taxation
    - Files: http://Dataset.csv, http://Dashboard.twbx, Global_Fuel_Story.twbx
    - MySkillWallet - Moved to To Be Reviewed

*6.* ***KEY FINDINGS & RESULTS***

1. Hong Kong highest due to 60%+ tax, no oil reserves
2. Venezuela, Libya, Iran lowest (<$0.20) due to heavy subsidy
3. Tax is #1 Driver (Correlation 0.85), crude oil cost is similar globally (~$0.40)
4. Diesel vs Petrol Gap shows policy: India/USA diesel cheap (subsidy), Europe diesel costly (green tax)
5. Developed Nations = High Tax (Netherlands 65%, Denmark 62%) - revenue for public transport
6. Performance Intelligence: Low tax + high subsidy = unsustainable, High tax = better infrastructure but high citizen cost

*7.* ***CONCLUSION & FUTURE SCOPE*** :

Project successfully proves taxation is main factor, not crude cost. Dashboard + Story clearly communicates to non-technical users. All requirements met.

Future:

- Add Year-wise trend 2010-2026
- Add Crude Oil vs Retail correlation
- Add GDP/Inflation for affordability index
- Add Tableau Public live link
- Add Prediction Model
